Carrier Transicold Delivers Vector® HE 19 Units to Dale Brothers UK

WARRINGTON, England, November 17, 2021 — Telford-based transportation company, Dale Brothers UK, has taken delivery of six new refrigerated trailers, each mounted with the company's first [Carrier Transicold](#) Vector® HE 19 MT (high efficiency multi-temperature) units, a move designed to help reduce running costs and improve fleet efficiency. *Carrier Transicold is a part of Carrier Global Corporation (NYSE: CARR), the leading global provider of healthy, safe, sustainable and intelligent building and cold chain solutions.*

A Carrier Transicold customer since 2000, Dale Brothers UK's six new 13.6-metre Chereau trailers replace older assets. Eight more identical trailers are expected for delivery in 2022.

"We first started using Carrier equipment more than 20 years ago when we bought some second-hand trailers mounted with their systems," said Neyland Dale, Managing Director, Dale Brothers UK. "We were so impressed with the performance and reliability, when it came to replacing those trailers, specifying new Carrier units was the only logical next step – and we've been doing that each time we've updated our fleet since."

Combining Carrier Transicold E-Drive™ all-electric technology with a new multi-speed engine design, the Vector HE 19 unit delivers up to 30% fuel savings when compared to the previous generation Vector 1950. In addition, the system's fully hermetic scroll compressor and economiser provides a 40% increase in refrigeration capacity during pull-down, as well as a 50% reduction in refrigerant escape.

The system is also 19% more efficient when plugged into the electrical grid on standby, meaning that the Vector HE 19 unit can help to lower diesel, maintenance and electricity costs. In addition, the units operate 3 dB(A) quieter than the legacy Vector 1950, significantly reducing sound pollution.

"We specifically chose the new Vector HE 19 unit after hearing good things from our fellow logistics customers about how efficient they are," said Dale. "With increased cooling capacity and better fuel efficiency, we will reduce our running costs while simultaneously reducing our carbon footprint."

Dale Brothers UK has also opted for Carrier Transicold's advanced telematics package. The system's two-way wireless communication helps fleets manage their refrigerated assets through remote unit monitoring and control, alongside diagnostics and data management. The system allows Dale Brothers to demonstrate its effective management of the cold chain to its customers, helping to provide additional levels of customer service.

Expected to operate for eight to 10 years, the new trailers will transport a variety of fresh and frozen food products for customers across the UK and northern Europe. Operating six to seven days a week, they typically clock up around 130,000 kilometres per year from the company's main depot in Telford.

Carrier Transicold creates refrigeration solutions to handle precise temperature-controlled cargo, like food and beverages, as part of its Healthy, Safe, Sustainable Cold Chain Programme. Learn more at corporate.carrier.com/healthycoldchain. Products and services are designed to ensure the safe delivery and consumption of consumer perishable goods.
