Carrier Transicold Launches Real-Time Emissions and Fuel Cost Insights in Lynx Fleet to Drive Sustainable Fleet Performance

Demo Lynx Fleet and explore Carrier Transicold's full portfolio of sustainable solutions at Solutrans at Hall 4, Stand D 065

RUEIL-MALMAISON, France, Oct. 16, 2025 – Carrier Transicold is helping customers reduce waste, boost efficiency and meet environmental targets through enhancements to Lynx Fleet. New sustainability functionality delivers real-time insights into carbon emissions and fuel consumption, while offering intelligent recommendations tailored to each fleet's behaviour, supporting compliance with European climate regulations and enhancing operational decision making. Lynx Fleet will be showcased at Solutrans 2025, held Nov. 18-22 at Lyon EUREXPO. *Carrier Transicold is part of Carrier Global Corporation (NYSE: CARR), global leader in intelligent climate and energy solutions.*

"Lynx Fleet's new sustainability functionality transforms environmental data into strategic action," said Jérôme Struk, Service Director, Truck Trailer International, Carrier Transicold. "It empowers fleet operators to make smarter decisions that reduce emissions, control fuel costs and drive measurable progress toward environmental targets, all while enhancing operational performance."

The new sustainability functionality enables fleet managers to monitor their estimated carbon dioxide (CO_2) emissions and fuel costs in real time, with reporting

aligned to regulatory frameworks such as the Vehicle Energy Consumption Calculation Tool (VECTO). This visibility supports compliance and gives managers a clear view of vehicle performance.

An intelligent recommendation engine offers tailored practical measures to improve energy efficiency based on fleet-specific behaviours. These recommendations can help control costs and support progress toward European climate objectives.

In 2026, the feature is expected to continue to evolve to offer broader recommendations across the fleet, adding to its value. Alerts and automated workflows will guide drivers and managers in applying best practices, flagging issues like prolonged door openings or insufficient battery recharging and triggering corrective actions. The broader the implementation of recommendations across the fleet, the greater the value and measurable results.

Powered by machine learning, Lynx Fleet continuously improves. Data is anonymised and aggregated in accordance with applicable data protection laws and to enhance the recommendation engine, creating shared value for all Lynx Fleet users.

Carrier Transicold combines digital innovation with best-in-class field expertise. When integrated with BluEdge service, Lynx Fleet also supports optimised refrigeration unit availability, enhanced regulatory compliance and full visibility into fleet environmental performance.
