## **Carrier Commercial Refrigeration Helps Customers Reduce Costs Amid Energy Crisis in Europe**

- *New Carrier Energy Optimisation Programme: Delivering Sustainable Savings offers a strong portfolio of products to help customers reduce energy usage up to 40%\**
- *Customers can upgrade existing installations through modernisation, with option to lease new systems*

**RUEIL-MALMAISON, France, September 28, 2022** — With sharp increases in energy costs globally, [Carrier Commercial Refrigeration](#) is launching its new Energy Optimisation Programme aiming to deliver sustainable savings. Carrier has proven, ready-to-install products to help customers reduce their energy usage by as much as 40%\*, while also reducing their carbon footprint. *Carrier Commercial Refrigeration is a part of Carrier Global Corporation (NYSE: CARR), the leading global provider of healthy, safe, sustainable and intelligent building and cold chain solutions.*

The Carrier Energy Optimisation Programme: Delivering Sustainable Savings offers a broad portfolio of EcoDesign-compliant products and solutions to provide businesses – from small commercial applications to large industrial installations – access to an array of modern energy and cost-efficient technology. As part of this programme, Carrier will offer on-site energy evaluations during which its team will provide custom recommendations on how to reduce energy consumption at the customer site.

“We understand the uncertainty our customers are experiencing with the unprecedented spike in energy prices, and we are partnering with them to help reduce energy costs while continuing to maximise merchandising opportunities,” said David Appel, President, Carrier Commercial Refrigeration. “We have a strong portfolio of energy-efficient products that can make a real difference for our customers to reduce their energy cost exposure now and prepare for an unpredictable 2023. These solutions may ultimately be the difference between a store remaining open or shuttering its doors. We are committed to working with our customers to meet this challenge head on and are offering on-site energy evaluations to help them better understand their energy usage and alternative solutions.”

Carrier offers a wide range of comprehensive energy-saving solutions for previously installed equipment that combined can offer energy savings up to 40%\* per store. Customers can choose from energy-efficient cabinets, systems and modernisation products for the existing installed base. Cabinets can also be equipped with advanced energy-saving technologies, such as the BREEZTec™ air circulation system, inverter technology and propane systems. Carrier’s systems, such as CO<sub>2</sub> racks, provide innovative ejector technology, which increases the efficiency of the refrigeration system. Carrier’s modernisation portfolio also offers innovative solutions, such as glass door retrofits, new generation LED and shelf-edge technology for open cabinets.

Customers also can access a range of new and upcoming products to maximise their energy-saving potential. For example, the versatile MiniCO<sub>2</sub>OL® Compact offers efficient refrigeration capacities of up to 190 kilowatts (kW) for medium temperature

applications and 56.5 kW for low temperature use, along with the ability to recycle heat generated during the refrigeration process to heat tap water and/or central heating.

Customers also now have the option to acquire new systems or modernisation solutions through leasing options proposed by Carrier's finance partner. With these financing solutions customers can gain access to Carrier's energy-saving technology as quickly as possible.

Guests of the Chillventa tradeshow, held October 11-13 in Nuremberg, Germany, can see Carrier's latest innovations in energy saving heating and cooling technology, and can learn more about the Carrier Energy Optimisation Programme from team members at the stand.

The latest energy-efficiency programme aligns with Carrier's [2030 Environmental, Social and Governance goal](#) to reduce its customers' carbon footprint by more than one gigaton.

Carrier's latest products are part of its [Healthy, Safe, Sustainable and Intelligent Cold Chain Programme](#), which provides fresh foods and medications to people around the world and ensures the safe storage and transport of critical vaccines through advanced connectivity and visibility. For more information, visit [carrier-refrigeration.com](http://carrier-refrigeration.com) or follow [@SmartColdChain](https://twitter.com/SmartColdChain) on Twitter. Customers interested in the Energy Optimisation Programme are invited to contact their local Carrier representative or contact [energysavings@carrier.com](mailto:energysavings@carrier.com).

\*Depending on the cabinet model and/or mechanical system, as well as optional equipment selected during configuration and different environmental conditions, the energy saving potential for the cabinet and/or mechanical system you are using may deviate. The values given are comparisons between the operation of the cabinets and/or

mechanical systems without and with the additional services offered through the Carrier Energy Optimisation Programme (referred to as "Energy Savings Solutions"). The Energy Savings Solutions available from Carrier can be accessed and viewed at <https://www.carrier.com/sustainable-savings>.

### **About Carrier Commercial Refrigeration**

Carrier Commercial Refrigeration (CCR) is a leading supplier of high-efficiency turnkey refrigeration systems and services in the food retail and cold storage industries. CCR offers a diverse range of products to keep stores cool, energy costs low and products attractively displayed for maximised sales; comprehensive service and support to ensure optimum performance and a centralised remote management monitoring network. Carrier Commercial Refrigeration is a part of Carrier Global Corporation, the leading global provider of healthy, safe, sustainable and intelligent building and cold chain solutions. Founded by the inventor of modern air conditioning, Carrier is the world's leader in high-technology heating, air conditioning and refrigeration solutions. Carrier experts provide sustainable solutions, integrating energy-efficient products, building controls and energy services for residential, commercial, retail, transport and food service customers. For more information, visit [carrier-refrigeration.com](http://carrier-refrigeration.com) or follow [@SmartColdChain](https://twitter.com/SmartColdChain) on Twitter.
