**COMPLETE AIRCRAFT GROUP AND TEKENABLE LAUNCH NEW
BOROSCOPE MAINTENANCE SOFTWARE SOLUTION**

Complete Aircraft Group (CAG) has partnered with global IT services provider, TEKenable, to develop a new maintenance software solution aimed at streamlining compliance and reporting processes through real-time, cloud-based data management.

The system – built from the ground up in conjunction with TEKenable’s TEKaviation team – will initially support CAG’s engine boroscope services. Available via any connected desktop or mobile device, it allows engineers to instantly upload data pertaining to the work, in the field, helping to improve turnaround times and subsequently lower associated expenditure.

Jason Davies, Business Development Manager at Complete Aircraft Group says: “The goal of this project was to use available technologies to create a powerful, one-stop solution capable of delivering huge efficiency and cost-saving benefits to our customers.

“The TEKenable team instantly understood the concept, developing an intuitive dashboard that allows each step of the boroscope checks to be uploaded in real-time. With the relevant data now instantly accessible, the process becomes much more efficient, with the system’s automated reporting slashing the work hours required to get the engines back into service.”

Through their shared insight and sector expertise, the two companies have developed an entirely new way of working, utilising the cloud to replace antiquated paper-based processes and repetitive, time-consuming form filling.

Peter Rose, Group CIO at TEKenable says: “We are very excited by the partnership with CAG, who bring unrivalled expertise and knowledge of the challenges faced across the full range of MRO processes. Combined with the power of our TEKaviation platform and an expert rapid delivery software team, we’ve created a solution that will support genuine business transformation.”

Looking forward, other functionality and modules are planned to be integrated, including CAG’s existing personnel competency package, ELMS. These developments will help to create a centralised, fully transparent source of truth for a range of maintenance tasks, providing users with access to a wealth of up-to-date, real-time data.

For now, the initial boroscope support solution is ready for launch, with CAG already demonstrating the potential benefits to its range of commercial and business aviation customers.

Editor's Notes:

Complete Aircraft Group (CAG)

CAG is a global independent specialist solution provider for high quality aircraft tooling, parts and components. The company works closely with global airlines, leading maintenance repair organisations (MROs), original equipment manufacturers (OEMs) and other aviation-related organisations to source and deliver reliable aircraft solutions across the world. Through trusted and established vendor supply chain contacts, CAG enables cost savings and increased efficiency for customers.

Forming Complete Aircraft Group are business aviation MRO, Aerocare, and competency and compliance software solution, ELMS.
