

## PRESS RELEASE

### Phoenix Marine to Showcase Single Arm Tender Lift at METSTRADE 2024

*A full-scale model of the compact lifting solution, as seen on the Fairline Targa 40, will be at the Amsterdam RAI this November*

**PETERBOROUGH, England, October 14, 2024** — British hydraulic and mechanical systems manufacturer [Phoenix Marine](#) will showcase its Single Central Arm Tender Lift system for superyachts at METSTRADE 2024 in Amsterdam, November 19-21. A working demonstration model of the new compact lifting solution will be available for visitors to view throughout the exhibition.

The compact lifting solution has been designed by the company's engineers in Peterborough, UK, to be mounted centrally for smaller transoms or dual prop boats — where twin arm systems are not always suitable. Weighing just 195kg, this lightweight lift debuted on the Fairline Targa 40 at Boot Düsseldorf in January 2024, a popular attraction on this year's boat show circuit.

Elizabeth Noles, Managing Director at Phoenix Marine says: "I'm proud of this system and the work that's gone into developing it; it's a great addition to the range of solutions we can offer. We're also bringing a scaled down arm from the new 2000kg Linear Tender Lift, and we're excited to share that we'll soon have a Single Central Arm Linear Tender Lift available to boatbuilders."

As with all Phoenix Marine products, the Single Arm Central Tender Lift is fully designed and manufactured in-house, from simulation to fabrication and delivery. Each product is backed by a worldwide warranty, providing customers with the added assurance that Phoenix Marine's expert team is always close at hand, ready to offer support wherever needed.

"This year presents a fantastic opportunity for our industry colleagues to meet our new Manufacturing Director, Stefan Rice. I want to invite our customers to stop by our stand during the event to connect with him and the rest of the team," adds Noles.

Phoenix will be at Stand 701 in Hall 10, welcoming attendees to enjoy refreshments while discussing the company's product portfolio and exploring tailored hydraulic and fluid powered solutions to meet specific needs.
