## **FRANK REDMAN & SONS SEES FAST RESULTS FROM WHEELY-SAFE TECHNOLOGY**

Wheely-Safe's intelligent tyre pressure monitoring system (TPMS) has already proved a wise investment at Frank Redman & Sons – saving the firm from two costly and potentially dangerous tyre blow outs.

The Bedfordshire-based aggregates business – a contract haulier for Tarmac Group – is in the process of rolling out the technology across its fleet of eight-wheel tippers and 6x2 tractor units to improve the health & safety of its operation, reduce downtime and help cut fuel costs.

Martin Redman, Owner of Frank Redman & Sons says: “We have the system installed on three of our tippers so far and five tractor units, which are pulling bulk trailers. It has already given us great results.

“On two separate occasions it has saved us from a potential blow out. As soon as the pressure dropped in the tyres, the alert started flashing in the cab and allowed the driver to pull over safely to inspect the issue. If he had carried on running as usual, it could have easily ruined the sidewall and we'd be looking at buying a new tyre. The financial savings soon tot up.”

Frank Redman & Sons has specified Wheely-Safe's external TPMS sensors, which replace the valve cap and auto-pair with an in-cab solar receiver.

The company's drivers are also utilising Wheely-Safe's handy Pressure and Brake Temperature Checkers, as well as WalkAround Checkers for their daily inspections.

“The whole system is so easy to use and really simple to fit,” adds Redman. “It’s been a great addition to our operation.”

**Notes to editor:**

Wheely-Safe is an automotive technology business founded in 2010 by two lifelong friends – Gary Thomas, a Director of his own transport compliance consultancy, and Gary Broadfield, a Director of Technology and serial inventor for a large Japanese electronics manufacturer. Together they brought the marriage of skills required to help solve wheel loss issues in the automotive sector, and to tackle the huge number of vehicles driving every day on under-inflated tyres. The early years of Wheely-Safe concentrated on attaining worldwide patent protection and technology small enough to fit near the wheels of all vehicle types, from cars and vans to trucks and trailers – with its first products launched into the market during 2018, and a second generation following in 2022.
